

# Drive Shaft Cover

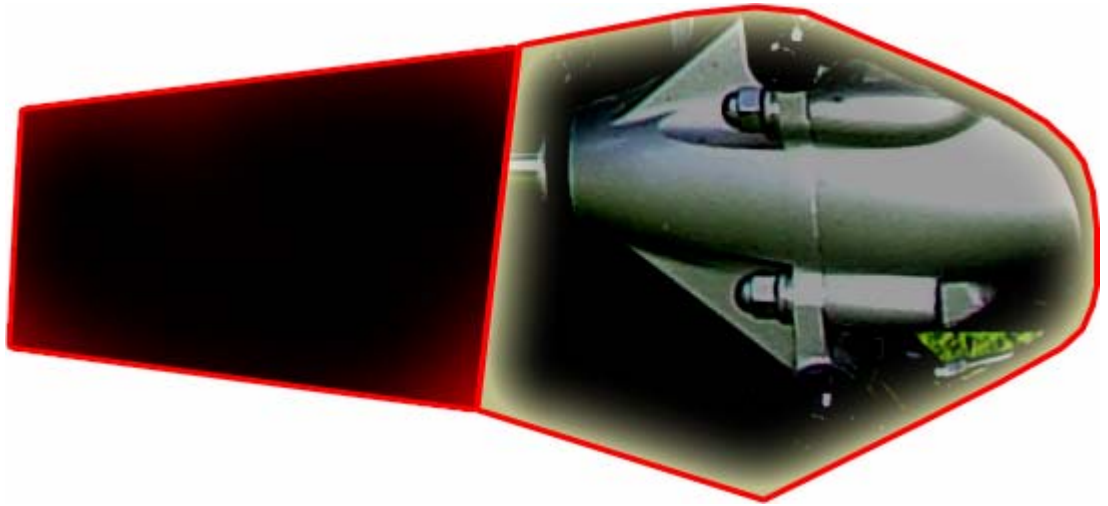

by Webslinger

After searching the internet looking for a drive shaft cover – I came to one conclusion – *they all cast was too damn much !*

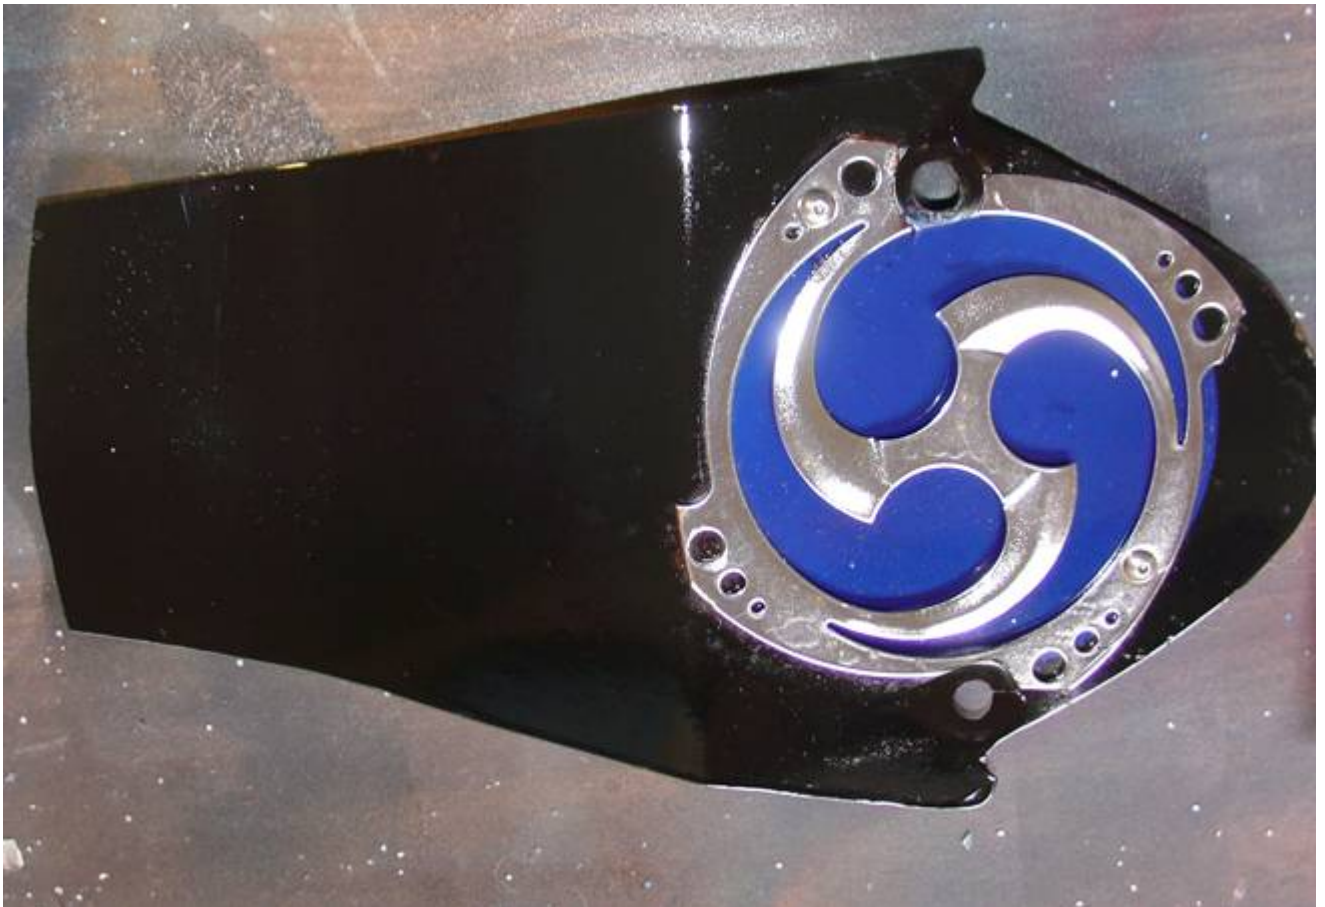

SO – I got me a piece of cardboard and traced out the outline of the rear of the swingarm -

I then purchases a sheet of brushed aluminum door flashing form Home Depot – total price about \$7.50

Placed the cardboard over the sheet of metal and cut it out with a dremel tool cutoff wheel

And then placed 2 bends as shown – this bolts up under the 2 forward bolts of the final drive – whole ting took me about 20 minutes to cut out – paint and dress up

Real nice effect for the price of a hunk a metal and a cutoff wheel
